## SYSTEM FOR AUTHORIZING TRANSACTIONS USING SPECIALLY FORMATTED SMART CARDS

### Cross-Reference to Related Applications

None

### Field of the Invention

The invention relates in general to transaction systems and networks. More specifically, the invention relates to smart cards and smart card authorization systems that provide standardization through the use of a fixed data structure, thereby allowing multiple point-of-sale systems to recognize and access the smart cards regardless of upper level user interfaces. In particular, the invention provides a method of sharing data and/or value between a smart card issued to a user and a point of sale system in an entertainment, theater, restaurant, retail business or other venue.

### Background of the Invention

Systems that allow a user to complete a transaction at a specified location are generally referred to as point-of-sale systems. Point-of-sale systems employ various mechanisms to permit the user to interact with a transaction network to complete a variety of different types of transactions. A sales kiosk or computer terminal, for example, may be employed that allows a user to complete a sales transaction using a credit card, debit card or specialty access cards such as pre-paid gift certificate cards. The sales kiosk or computer terminal generally includes a card reader to read information from the card that is supplied to a transaction network for verification. Upon completion of verification, the transaction is authorized and the sale is completed.

## SYSTEM FOR AUTHORIZING TRANSACTIONS USING SPECIALLY FORMATTED SMART CARDS

### Cross-Reference to Related Applications

~~This application claims the benefit of United States Provisional Application Serial No. 60/195,880, filed April 7, 2000.~~  
~~None~~

### Field of the Invention

5 The invention relates in general to transaction systems and networks. More specifically, the invention relates to smart cards and smart card authorization systems that provide standardization through the use of a fixed data structure, thereby allowing multiple point-of-sale systems to recognize and access the smart cards regardless of upper level user interfaces. In  
10 particular, the invention provides a method of sharing data and/or value between a smart card issued to a user and a point of sale system in an entertainment, theater, restaurant, retail business or other venue.

### Background of the Invention

15 Systems that allow a user to complete a transaction at a specified location are generally referred to as point-of-sale systems. Point-of-sale systems employ various mechanisms to permit the user to interact with a transaction network to complete a variety of different types of transactions. A sales kiosk or computer terminal, for example, may be employed that allows a user to complete a sales transaction using a credit card, debit card or  
20 specialty access cards such as pre-paid gift certificate cards. The sales kiosk or computer terminal generally includes a card reader to read information from the card that is supplied to a transaction network for verification. Upon completion of verification, the transaction is authorized and the sale is completed.
